                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents a human G-protein coupled receptor (GPCR), hRUP20. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer.

Non-endogenous version of human GPCRs are also utilized in research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agon inverse agonists or partial agonists for use as therapeutic agents

                                                                                                                                                                                          The present sequence is the protein sequence for a human guanosine triphosphate (GTP)-binding protein-coupled receptor. The receptor is useful for the investigation, diagnosis, treatment and prevention of diseases associated with GTP-binding protein-coupled receptors, including neurological, circulatory, digestive system, immune system, muscle and urinary system disorders. GTP-binding proteins are also known as
                                                                                                                                                                                                                                                                                                                      Family of guanosine triphosphate binding protein coupled receptors and genes encoding them for treatment and prevention of diseases associated with these receptors

PIR_71:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
